NOW RECRUITING PARTICIPANTS!

ABOUT OUR LAB

Our lab focuses on understanding how the processing of social information shapes, and is shaped by, social experience in autistic people. This focus on social plasticity, or capacity to learn from and adapt to their complex social environments, includes the role of social environment, affective processing, and neural plasticity that underlie this capacity.

WHO WE ARE

The Autism and Neurodevelopment Lab is run by Dr. Erin Kang, Assistant Professor of Psychology, at Montclair State University. Dr. Kang has a group of dedicated Graduate (Doctoral and Master's-level) and Undergraduate research assistants working under her guidance.
